Y8 Computer Science

How to make a computer

smart

Name		
Teacher		
Group	GCSE Target	

ΤΟΡΙϹ	GCSE 1-3	GCSE 4-6	GCSE 7-9
8.1 Operating Systems & hardware	 Understands the function of the main hardware components; memory, CPU and input and output devices. Understands the main functions of an operating system. Understands the difference between the main operating systems. 	 Understands the advantages of using open source software. Can compare OS and make a proposal to suit a particular client need. Can create effective digital content, for a specific audience and purpose, by using a range of software packages and refined search techniques. 	 Makes appropriate improvements to their work as a result of feedback. Understands what the fetch- decode-execute cycle is and can explain how it works.
8.2 CMD	 Understands what the command line is. Can use CMD to create, delete and rename directories. 	Can use and test more advanced command line prompts to move directories and navigate between them.	Understands what a virtual machine is and when it could be useful.
8.3 Binary	 Can convert binary to denary and denary to binary. Understand that computers are not intelligent and have to be programmed. Understand why computers use binary 	 Can work with different file sizes Can do binary addition Understand why overflow errors happen & give an example. Understand how negative numbers are represented in binary 	 Understand why we use Two's Complement & Sign and Magnitude. Be able to apply logical and arithmetic shifts
8.4 Instruction Set Design	 Can create a range of algorithms; flow chart, program code and pseudo code. Understand the need for precise instructions. Understands that algorithms are implemented on digital devices as algorithms. 	 Can detect and correct errors in algorithms, including debugging code. Can apply logic to predict the outcomes of different algorithms. Implements algorithms to create working programs. 	 Test and debug algorithms independently Use sub-routines/ functions Uses IF/ELIF/ELSE and while loops.

8.5 How to make a computer appear smart	 Evaluates the appropriateness and ethical implications of digital devices and programs. Understands that computers have no intelligence unless programmed. Understands that computers use inputs and outputs to interact with humans. Can create their own AI. 	 Use a range of inputs in a program to interact effectively and in a human like way with a person. Use if, elif, else and while loops Understand different error messages in Python and be able to correct syntax errors independently. Use coding conventions such as; meaningful variable names, comments & white space. 	 Use sequence, selection & iteration and be able to explain what they are. Understand what a logic & runtime error are and be able to give examples Be able to initialise a score and use a scoring system Use Python libraries e.g. sleep & random Explain the advantages and disadvantages of compiled/interpreted
8.6 The internet	 Understand the difference between the internet and the world wide web. Has awareness of and can use a range of internet services e.g. VOIP. Understand the name and purpose of key hardware components. 	 Understand the difference between different network topologies. Can explain why Sale High School uses a Star topology. Understand the difference between a hub and a switch. Knows what a network protocol is and can give examples. 	 Knows a range of ways to report online concerns Has an awareness of digital content and references appropriately sources used. Understands the difference between a MAC and an IP address. Understands what handshaking is and how the internet works.
8.7 Sorted	 Understands the capabilities of humans and the 'brute force' approach. Understand what a linear and binary search are. Understand what a bubble and swap sort are. 	 Understand the benefits and drawback of different searches and sorts and can choose and justify which would be best in a given situation. Can create a program for a linear search. 	 Know what a flag is and why it is used. Can create an algorithm for a binary search.
