Year 8 Autumn Term 1
Department: Mathematics
Unit of Work: Whole number theory

| Projection Grades <br> $1-3$ |
| :--- |
| - Use mental calculation strategies to solve |
| number problems including those involving |
| money and measures |
| - Choose the appropriate operation when |
| solving addition and subtraction |
| - Multiply and divide two digit numbers by 2, |
| 3,4 or 5 as well as 10 with whole number | 3,4 or 5 as well as 10 with whole number answers and remainders

- Use mental recall of addition and subtraction facts to 20 in solving problems involving larger numbers
- Solve whole number problems including those involving multiplication or division that may give rise to remainders
- Use the knowledge that subtraction is the inverse of addition and understand halving as a way of 'undoing' doubling and vice versa
- Use mental recall of addition and subtraction facts to 10 .
- Use efficient written methods of addition and subtraction and of short multiplication and division
- Multiply a simple decimal by a single digit
- Solve problems with or without a calculator
- Check the reasonableness of results with reference to the context or size of numbers
- Derive associated division facts from known multiplication facts
- Add and subtract two digit numbers mentally
- Add and subtract three digit numbers using written method
- Calculate percentages and find the outcome of a given percentage increase or decrease
- Add and subtract fractions by writing them with a common denominator, calculate fractions of quantities (fraction answers), multiply and divide an integer by a fraction
- Use a range of mental methods of computation with all operations
- Recall multiplication facts up to $10 \times 10$ and quickly derive corresponding division facts.
Projection Grades
$7-9$
- Understand the effects of multiplying and dividing by numbers between 0 and 1
- Add, subtract, multiply and divide fractions
- Make and justify estimates and approximations of calculations; estimate calculations by rounding numbers to one significant figure and multiplying and dividing mentally
- Use a calculator efficiently and appropriately to perform complex calculations with numbers of any size, knowing not to round during intermediate steps of a calculation
- Use place value to make approximations
- Recognise negative numbers in contexts such as temperature
- Use simple fractions that are several parts of a whole and recognise when two simple fractions are equivalent
- Begin to use decimal notation in contexts such as money
- Solve problems involving calculating with powers, roots and numbers expressed in standard form, checking for correct order of magnitude and using a calculator as appropriate.

| Projection Grades 1-3 | Projection Grades 4-6 | Projection Grades 7-9 |
| :---: | :---: | :---: |
| - Understand and use probability <br> - In probability, select methods based on equally likely outcomes and experimental evidence, as appropriate <br> - Understand and use the probability scale from 0 to 1. <br> - Classify 3-D and 2-D shapes in various ways using mathematical properties such as reflective symmetry for 2-D shapes <br> - Begin to recognise nets of familiar 3-D shapes, e.g. cube, cuboid, triangular prism, square-based pyramid <br> - Recognise shapes in different orientations and reflect shapes, presented on a grid, in a vertical or horizontal mirror line <br> - Describe position and movement <br> - Use a wider range of measures including non-standard units and standard metric units of length. | - Find and record all possible mutually exclusive outcomes for single events and two successive events in a systematic way <br> - know that the sum of probabilities of all mutually exclusive outcomes is 1 and use this when solving problems. <br> - Use the properties of 2-D and 3-D shapes <br> - Make 3-D models by linking given faces or edges and draw common 2-D shapes in different orientations on grids <br> - Reflect simple shapes in a mirror line, translate shapes horizontally or vertically and begin to rotate a simple shape or object about its centre or a vertex <br> - Choose and use appropriate units and instruments <br> - Find perimeters of simple shapes and find areas by counting squares <br> - Use a wider range of properties of 2-D and 3-D shapes and identify all the symmetries of 2-D shapes <br> - Use language associated with angle and know and use the angle sum of a triangle and that of angles at a point <br> - Measure and draw angles to the nearest degree, when constructing models and drawing or using shapes <br> - Solve problems involving the conversion of units and make sensible estimates of a range of measures in relation to everyday situations <br> - Understand and use the formula for the area of a rectangle and distinguish area from perimeter. | - Understand relative frequency as an estimate of probability and use this to compare outcomes of an experiment <br> - Know when to add or multiply two probabilities <br> - Use tree diagrams to calculate probabilities of combinations of independent events. <br> - Classify quadrilaterals by their geometric properties <br> - Solve geometrical problems using properties of angles, of parallel and intersecting lines, and of triangles and other polygons <br> - Identify alternate and corresponding angles; understand a proof that the sum of the angles of a triangle is $180^{\circ}$ and of a quadrilateral is $360^{\circ}$ <br> - Enlarge 2-D shapes, given a centre of enlargement and a positive whole number scale factor <br> - Know that translations, rotations and reflections preserve length and angle and map objects onto congruent images <br> - Deduce and use formulae for the area of a triangle and parallelogram. <br> - Know and use the formulae for the circumference and area of a circle <br> - Understand the difference between formulae for perimeter, area and volume in simple contexts by considering dimensions. |
