

Projection Grades (end of year 11) 1-3	Projection Grades (end of year 11) 4-6	Projection Grades (end of year 11) 7-9
<ul style="list-style-type: none"> <input type="checkbox"/> Correctly use the term: diet and recall what is meant by a balanced diet. <input type="checkbox"/> Recall why we need food (energy, growth and repair, health). <input type="checkbox"/> State what is shown on food labelling and Interpret nutrition information <input type="checkbox"/> Recall some good sources of carbohydrates, fats, proteins and fibre. <input type="checkbox"/> Recall that if a person’s energy intake is different from the amount of energy that they need, their mass will change. <input type="checkbox"/> Calculate energy requirements for daily needs and activities. <input type="checkbox"/> Describe the general uses of carbohydrates, fats (lipids), proteins, vitamins and minerals by the body. <input type="checkbox"/> Explain the benefits of a balanced diet and correctly use the term: malnutrition. <input type="checkbox"/> Explain how deficiency diseases are caused and describe the factors that may lead to obesity. <input type="checkbox"/> Identify and recall the main parts of the human digestive system and describe the functions of the organs in the human digestive system. <input type="checkbox"/> Describe the role of enzymes as catalysts in digestion. <input type="checkbox"/> Recall some benefits and drawbacks of bacteria in the digestive system. <input type="checkbox"/> Recall what happens in respiration <input type="checkbox"/> Recall where digested food enters the blood and the function of blood plasma. <input type="checkbox"/> Explain how diffusion occurs in terms of movement of particles. <input type="checkbox"/> Explain the short- and long-term effects of alcohol. <input type="checkbox"/> Describe the key characteristics of the five kingdoms of organisms and use this to assign organisms to their kingdoms. <input type="checkbox"/> Correctly use the term biodiversity. <input type="checkbox"/> Explain how organisms are classified, using smaller and smaller groupings of shared characteristics. <input type="checkbox"/> Correctly use the terms asexual reproduction and sexual reproduction. <input type="checkbox"/> Recall ways in which plants reproduce asexually. <input type="checkbox"/> Identify and give examples of inherited variation. <input type="checkbox"/> Describe how the fusing of gametes (sex cells) and their nuclei during fertilisation form a fertilised egg cell. <input type="checkbox"/> Correctly use the terms species, hybrid and pollination. <input type="checkbox"/> Identify the main structures and functions in a flower and identify those that are male and those that are female. <input type="checkbox"/> Use flower structure and pollen shape to identify wind-pollinated and insect-pollinated flowers. <input type="checkbox"/> Identify different structures within a seed. <input type="checkbox"/> Identify different kinds of fruits and describe how they disperse seeds. <input type="checkbox"/> Describe the events that occur after pollination leading to fertilisation. <input type="checkbox"/> Describe how a fertilised egg cell grows into an embryo. <input type="checkbox"/> Describe a plant’s life cycle using a diagram. <input type="checkbox"/> Recall the resources needed for germination. <input type="checkbox"/> Describe what happens in photosynthesis. 	<ul style="list-style-type: none"> <input type="checkbox"/> Describe the uses of fibre and water by the body. <input type="checkbox"/> Describe tests for fat and starch. <input type="checkbox"/> Interpret results from simple food tests (e.g. fat, starch, protein, vitamin C). <input type="checkbox"/> Describe the relationships between diet, exercise, age, sex and energy. <input type="checkbox"/> Explain why body mass changes if energy input into the body does not match energy output. <input type="checkbox"/> Recall sources of some individual vitamins and mineral salts (e.g. vitamin A, vitamin C, calcium, iron). <input type="checkbox"/> Describe the effects of obesity on health. <input type="checkbox"/> Use dietary advice and nutrition information to design a healthy diet. <input type="checkbox"/> Interpret Reference Intake (RI) information. <input type="checkbox"/> Recall and identify examples of deficiency diseases (kwashiorkor, scurvy, rickets). <input type="checkbox"/> Explain the links between specific forms of malnutrition, diet and lifestyle. <input type="checkbox"/> Describe what happens during ingestion, absorption and egestion. <input type="checkbox"/> Explain how food is moved through the digestive system. <input type="checkbox"/> Use a model to describe basic enzyme action. <input type="checkbox"/> Explain how the structure of the small intestine allows efficient absorption of the soluble products of digestion. <input type="checkbox"/> Explain how the cells in the small intestine are adapted to absorb nutrients quickly. <input type="checkbox"/> Use a knowledge of diffusion to explain how nutrients enter the blood from the small intestine. <input type="checkbox"/> Identify the genus and species names from a binomial name. <input type="checkbox"/> Explain why preserving biodiversity is important (useful products, organism interactions, enriches our lives, disaster recovery). <input type="checkbox"/> Explain how inherited variation is caused (does not include genes). <input type="checkbox"/> Explain the difference in outcomes of asexual and sexual reproduction in plants. <input type="checkbox"/> Identify pollen grains and ovules as containing the male and female gametes. <input type="checkbox"/> Describe how the structures of a flower are adapted to their functions. <input type="checkbox"/> Describe how plants avoid self-pollination. <input type="checkbox"/> Explain why plants try to avoid self-pollination. <input type="checkbox"/> Explain how some pollen grains are adapted to their functions. <input type="checkbox"/> Explain the functions of the different parts of a seed and the importance of seed dispersal. <input type="checkbox"/> Explain the need for the different resources by a seed as it germinates. <input type="checkbox"/> Explain the importance of pollination for the production of foods. <input type="checkbox"/> Describe examples of interdependence and explain how changes in a population or community in an ecosystem affect other populations. <input type="checkbox"/> Explain how and why some seeds are prevented from germinating until a certain time. 	<ul style="list-style-type: none"> <input type="checkbox"/> Interpret results from food tests for reducing and non-reducing sugars (glucose and sucrose). <input type="checkbox"/> Describe the roles of vitamin A, vitamin C, calcium and iron in the body. <input type="checkbox"/> Describe the causes and control of Type 2 diabetes. <input type="checkbox"/> Evaluate different models of basic enzyme action. <input type="checkbox"/> Explain how bile helps in the digestion of lipids. <input type="checkbox"/> Use simple calculations (e.g. biodiversity index) to compare biodiversity. <input type="checkbox"/> Evaluate the advantages and disadvantages of sexual and asexual reproduction in plants in different conditions. <input type="checkbox"/> Evaluate different methods of pollination. <input type="checkbox"/> Evaluate different methods of seed dispersal. <input type="checkbox"/> Describe the importance of hybridisation in plant breeding. <input type="checkbox"/> Explain the production of seedless fruits using hybridisation. <input type="checkbox"/> Explain the importance of light/darkness for some seeds and their germination.
